

HELPFUL HINTS

KITCHEN:

GARBAGE DISPOSAL

Do not use when dishwasher is running. Use only COLD water before, during and after use.

DISHWASHER

Do not turn the dishwasher on if your disposal has food in it, or if the disposal is running.

WATER SHUT-OFF VALVES LOCATION

Dishwasher - Under the sink, one valve only, near the floor, nearest the dishwasher.

Sink - Under the broiler, near the floor for those that have wall ovens. There are two valves - hot and cold nearest the sink.

GAS PILOT LIGHT

Pilot lights are easily adjusted, and easily re-lit. Call the Management for assistance or the gas company if there is an emergency.

EXHAUST FAN

Located over your oven. Should be turned on when cooking, and the fan screen should be cleaned at least once a year.

LAUNDRY ROOM HOUSES:

CIRCUIT BREAKER BOX

The switches are automatic circuit breakers. If a short circuit occurs, one or more of the breakers will flip to the "trip" position in the center.

After any problem is corrected, set the breaker to the "off" position, and then back to the "on" position.

WASHING MACHINE WATER SUPPLY VALVES

For a single handle valve, keep it in the off, up position when not in use. Flip the valve down to utilize the washer.

For separate hot and cold valves, keep them turned all the way to the right when not in use, and to the left, to utilize the washer.
